

## What You Never Knew About Earth4Energy

The Earth4Energy ebook claims it can help you save up to 80% on your electricity bill, and perhaps even eliminate it completely. So does it live up our expectations? Without a doubt...Yes.

Its good aspects:

### 1 - Great value for money

Compared to its similarly priced competitors, the Earth4Energy guide, was well written and crammed with useful content. And if we had any problem figuring out how to build the solar or wind power system, we got speedy, helpful customer support.

### 2 - Great after-sale service

Our support tickets were answered not only quickly, but very thoroughly. Furthermore, a while back we recommended they provide video instructions to help people picture the building process better - and guess what? They recently did! How's that for meeting your customers' needs?

### 3 - Excellent solar panel plans

The solar power plans were full of advice and with the step-by-step videos, they were the easiest to follow. Micheal Harvey was accurate in saying it would cost us under \$150 for all the materials and parts, since we ended up only spending \$139.37. How crazy is that? If you think to get a professional system with similar power output would have cost well into the thousands of dollars!

Another great thing about the Earth4Energy ebook solar plans, is that they explained how to make the system portable - which we used to power our RV.

The problems we found:

### 1 - You need to scale up to start saving:

This is actually what we found wrong with ALL the home solar power and home wind turbine guides. They say that it will cost under \$250 to build both system, but what they do not say is that you will need more than that to make enough power to start saving more. So, according to how much power your home use and your climate, you will most probably have to build more than one solar and wind power system to get the ideal results.

The Final Decision:

With the most complete, step-by-step plans, diagrams, videos and customer support on the market, and the regular updates, Earth4Energy is the best guide to get you making your own home solar power and home wind turbine. And to give you an idea as why it is so good, it has more than 5 times the number of satisfied customers compared to its closest rivals - Homemade Energy and Efficient Planet.

## About the Author

And what's even better is that you can now try [Earth4Energy](#) for FREE, before deciding to make your own [Home Solar Power](#) and saving thousands of dollars on your electricity costs.
